Most circuits have more than one component, called a resistor that limits the flow of charge in the circuit. A measure of this limit on charge flow is called resistance.The simplest combinations of resistors are the series and parallel connections illustrated in Figure 1.The total resistance of a combination of resistors depends on both their individual values and how they are connected.

Static Equilibrium in Levers. For all levers the effort and resistance (load) are actually just forces that are creating torques because they are trying to rotate the lever. In order to move or hold a load the torque created by the effort must be large enough to balance the torque caused by the load. Remembering that torque depends on the distance that the force is applied from the pivot, the ...
