Like the oxygen sensors, the MAF sensor measures the amount of air entering the engine and help ensure the proper air-fuel mixture. A faulty MAF sensor can cause your engine to misfire, ultimately causing poor fuel economy, performance, and potentially more unnecessary damage to your engine. What to

Fast forward three years, to 2012, and at 67,000 miles, it came to a spluttering halt with 'Engine System Failure' on the dash. Still under warranty it was returned to Land Rover who investigated. The intercooler was found to be full of water, the left turbo shot and at least one injector in need of replacement.
