Asbestos has been classified as a known human carcinogen (a substance that causes cancer) by the U.S. Department of Health and Human Services (HHS), the U.S. Environmental Protection Agency (EPA), and the International Agency for Research on Cancer (IARC) (2, 3, 7, 8).

Asbestos Exposure and Cancer Risk Fact Sheet - National ...

Classically, risk assessments for human health endpoints involves four major steps: a hazard identification, dose-response assessment, exposures assessment and risk characterization (NRC 1983, 1994, 2009; EPA 2005).

4 Sustainability Assessment and Management: Process, Tools ...

The US Environmental Protection Agency (EPA) has set a maximum amount of fluoride allowable in drinking water of 4.0 mg/L. Long-term exposure to levels higher than this can cause a condition called skeletal fluorosis, in which fluoride builds up in the bones. This can eventually result in joint stiffness and pain, and can also lead to weak ...

Water Fluoridation and Cancer Risk

The US Environmental Protection Agency (EPA) maintains the Integrated Risk Information System (IRIS), an electronic database that contains information on human health effects from exposure to various substances in the environment. The EPA classifies benzene as a known human carcinogen.

Benzene and Cancer Risk - American Cancer Society

For individuals in the highest tertile of genetic risk, higher total EPA and DHA intakes were positively associated with colorectal cancer risk. Risk also varied by gender. Among men, use of fish oil supplements reduced colorectal cancer risk by an average of 34% or more depending on the frequency and duration of use, but this effect did not ...

Omega-3 Fatty Acids - Health Professional Fact Sheet

EPA has developed human health benchmarks for 430 pesticides to enable our partners to inform: (1) whether the detection level of a pesticide in drinking water or source waters for drinking water may indicate a potential health risk; and (2) the prioritization of water monitoring efforts.

Human Health Benchmarks for Pesticides (HHBPs) | US EPA

Guideline Values for Health Risk Assessment. Hot Spots Unit Risk and Cancer Potency Values; Acute, 8-hour, and Chronic Reference Exposure Level (RELs) Current Hot Spots Guidelines Technical Support Documents. Air Toxics Hot Spots Program Guidance Manual; Non-cancer Reference Exposure Levels (RELs) Cancer Potency Factors

Air Toxics Hot Spots - OEHHA

The California Environmental Protection Agency's Office of Environmental Health Hazard Assessment will convene a meeting of the Developmental and Reproductive Toxicant Identification Committee for possible listing of perfluorononanoic acid (PFNA) and its salts, and perfluorodecanoic acid and its salts, under the Safe Drinking Water and Toxic Enforcement Act of 1986.

Home | OEHHA

Environmental Risk Assessment. An environmental risk assessment (ERA) is a process for evaluating how likely it is that the environment may be impacted as a result of exposure to one or more environmental stressors, such as chemicals, disease, invasive species, and climate change.

Environmental Risk Assessment - an overview ...

The Legionella Risk Assessment Process. To carry out a legionella risk assessment landlords must have the knowledge, understanding and competency required. Landlords need to have an awareness of what legionella is, how it can affect people and how to carry out a risk assessment so that suitable control measures can be implemented.
