Brittle lacquers The brittle-lacquer technique of experimental stress analysis relies on the failure by crack- ing of a layer of a brittle coating which has been applied to the surface under investigation. The coating is normally sprayed onto the surface and allowed to air- or heat-cure to attain its brittle properties.

Stress is a risk factor for psychosis and treatments which mitigate its harmful effects are needed. Cannabidiol (CBD) has antipsychotic and anxiolytic effects. We investigated whether CBD would normalise the neuroendocrine and anxiety responses to stress in clinical high risk for psychosis (CHR) patients. Thirty-two CHR patients and 26 healthy controls (HC) took part in the Trier Social Stress ...
