The simplest differential equation is  $u'(x) = f(x)$  for  $a < x \leq b$ , but also  $(u(x) + c)' = f(x)$  for any constant  $c$ . To determine a unique solution a specification of the initial value  $u(a) = u_0$  is generally required. For example for  $f(x) = 2x$ ,  $0 < x \leq 1$ , we have  $u'(x) = 2x$  and the general solution is  $u(x) = x^2 + c$ .
