Evolution - Simple English

Wikipedia, the free encyclopedia

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Evolution - Wikipedia

—Douglas J. Futuyma. In the sense that evolution is overwhelmingly validated by the evidence, it is a fact. It is frequently

Evolution Chapter 9

said to be a fact in the same way as the Earth's revolution around the Sun is a fact. The following quotation from Hermann Joseph Muller's article, "One Hundred Years Without Darwinism Are Enough," explains the point

Evolution as fact and theory - Wikipedia

Adaptation is the evolutionary process where an organism becomes better suited to its habitat. This process takes place over many generations. It is one of the basic phenomena of biology. When people speak about adaptation, they often mean a 'feature' (a trait) which helps an animal or plant survive. An example is the adaptation of horses' teeth to grinding grass.

Schopf, "The early evolution of life: solution to Darwin's dilemma," Trends in Ecology and Evolution 9 (1994): 375-377.

Why Darwinism Is False | Discovery Institute

Evolution requires intermediate forms between species and paleontology does not provide them. The gaps must therefore be a contingent feature of the record. Darwin was concerned enough about this problem to devote a chapter of the "Origin" to it.
