$v_n$ , then  $v \in C^\infty(\Omega)$  because the sum is locally finite. Since  $X_\infty = \sum_{n=0}^\infty \|u_n - v_n\|_{W^{k,p}(\Omega)} \leq \sum_{n=0}^\infty C / 2^{n+1} < \infty$ , the sum  $\sum_{n=0}^\infty (u_n - v_n)$  converges in  $W^{k,p}(\Omega)$ . The sum,  $\sum_{n=0}^\infty (u_n - v_n)$ , also converges pointwise to  $u - v$  and hence  $u - v = \sum_{n=0}^\infty (u_n - v_n)$  is in  $W^{k,p}(\Omega) \cap C^\infty(\Omega)$  and

**Sobolev spaces, theory and applications**

Sobolev Spaces have become an indispensable tool in the theory of partial differential equations and all graduate-level courses on PDE's ought to devote some time to the study of the more important properties of these spaces. The object of these notes is to give a self-

functions which have a weak derivative  
we can define the first Sobolev norm as  $\|f\|_{W^{1,p}(\Omega)} = \|f\|_{L^p(\Omega)} + \|df\|_{L^p(\Omega)}$ : The  
Sobolev Space could then be defined as  
the set of weak differentiable functions
