Heptene is a higher olefin, or alkene with the formula C 7 H 14.The commercial product is a liquid that is a mixture of isomers.It is used as an additive in lubricants, as a catalyst, and as a surfactant.This chemical is also known as heptylene.

### Heptene - Wikipedia

For removing the particular object from ArrayList there are two ways. Call the function of ArrayList. Removing on the basis of the object. ArrayList.remove(object);

### How to remove specific object from ArrayList in Java ...

This answers more than just the question stated. In fact, I searched probably around a month ago for a good way to get one or more specific parts out of the URL string (I think it was probably the current page I was trying to get), and even though other questions were more on-target, their answers were not as useful and straightforward for that purpose as this one.
