Optics Eugene Hecht
Optics by Eugene Hecht is a masterpiece and a must-have for anyone in the field of optics/photonics. An especially attractive feature of the book is the large number of photographs that help to bring the material to life. The great thing about this book is the excellent quality of paper. You can happily scribble, underline and highlight text ...

Optics is the branch of physics that studies the behaviour and properties of light, including its interactions with matter and the construction of instruments that use or detect it. Optics usually describes the behaviour of visible, ultraviolet, and infrared light. Because light is an electromagnetic wave, other forms of electromagnetic radiation such as X-rays, microwaves, and radio waves ...

Cardinal point (optics) - Wikipedia
A practical way of understanding line-pairs is to think of them as pixels on a camera sensor, where a single line-pair corresponds to two pixels (Figure 2). Two camera sensor pixels are needed for each line-pair of resolution: one pixel is dedicated to the red line and the other to the blank space between pixels.

Tammy Lee (talee@optics.rochester.edu) What is diffraction? When parallel waves of light are obstructed by a very small object (i.e. sharp edge, slit, wire, etc.), the waves spread around the edges of the obstruction and interfere, resulting in a pattern of dark and ... Consistent with Geometrical Optics, its magnitude is constrained to be proportional to the refractive index n (2π/λfree is a normalization factor) In wave optics, the Descartes sphere is also known as Ewald sphere or simply as the k-sphere. (Ewald sphere may be familiar to you from solid state physics)

Lente sottile. Per una lente sottile immersa in aria, la lunghezza focale è la distanza dal centro della lente ai suoi punti focali. Per una lente convergente, per esempio una lente convessa, la lunghezza focale è positiva ed è la distanza alla quale un fascio di luce collimata viene focalizzato su un singolo punto. Per una lente divergente, ad esempio una lente concava, la lunghezza focale ...
