Definition & Examples - Study.com

Typically, a logic consists of a formal or informal language together with a deductive system and/or a model-theoretic semantics. The language has components that correspond to a part of a natural language like English or Greek. The deductive system is to capture, codify, or simply record arguments that are valid for the given language, and the semantics is to capture, codify, or record the ...

Classical Logic (Stanford Encyclopedia of Philosophy)

Reason is the capacity of consciously applying logic by drawing conclusions from new or existing information, with the aim of seeking the truth. It is closely associated with such characteristically human activities as philosophy, science, language, mathematics, and art, and is normally considered to be a distinguishing ability possessed by humans. ...

Reason - Wikipedia

Logic is an interdisciplinary field which studies truth and reasoning. Informal logic seeks to characterize valid arguments informally, for instance by listing varieties of fallacies. Formal logic represents statements and argument patterns symbolically, using formal systems such as first order logic. Within formal logic, mathematical logic studies the mathematical characteristics of logical ...

Symbolic anthropology studies the way people understand their surroundings, as well as the actions and utterances of the other members of their society. These interpretations form a shared cultural system of meaning—i.e., understandings shared, to varying degrees, among members of the same society (Des Chene 1996:1274).
